

INTERNAL FUNDTRANSFER INTEGRATION API DOCUMENTATION

API Name		Internal Fund Transfer API
Document Owner		NBC BANK
Document Author		Alex Nyerembe
Date	Version	Remarks
Oct 30, 2022	V 1.0	Api for Internal fund transfer
Nov 01, 2022	V 1.1	New Error code added on failure response.
May 26, 2025	V 1.2	Added extra authentication; Digital signature and x-api-key on headers

URL	<code>https://{BASE_URL}/{SERVICE_NAME}</code>
Method	POST
Header Parameters	- Content-Type: application/json - Accept: application/JSON - Signature: ygbevwevbdywevdbdywevgvwedv d - x-api-key: sjuwudbdbcmnabssb sdbbdbbsdbbsdbbsdbbsd
Sample JSON Payload	
Detail Fund Transfer Request	INTERNAL FT FT POST REQUEST: <pre>{ "header": { "service": "[to be given by NBC String - Mandatory]", "extra": { "pyrName": "[Payer Name String - Mandatory]" } }, "channelId": "[valid channelId String - Mandatory]", "channelRef": "[channel unique reference String - Mandatory]", "creditAccount": "[NBC Valid Account String - Mandatory]", "creditCurrency": "[NBC valid currency of the account String - Mandatory]", "debitAccount": "[NBC Valid Account String - Mandatory]", "debitCurrency": "[NBC valid currency of the account String - Mandatory]", "amount": "[Valid amount String - Mandatory]", "narration": "[Transfer Narrations String - Mandatory]" }</pre>

INTERNAL FUNDTRANSFER INTEGRATION API DOCUMENTATION

Success Fund transfer Response Payload	<pre>{ "statusCode": 600, "message": "SUCCESS", "body": { "hostReferenceCbs": "99520103000100000161", "hostStatusCodeCbs": "0", "hostReferenceGw": "CB2212131003324", "cbsRespTime": "20221213144646" } }</pre>
Failure Fund Transfer Response Payload	<pre>{ "statusCode": 700, "message": "FAILED: ", "body": { "hostReferenceCbs": "", "hostStatusCodeCbs": "57", "hostReferenceGw": "CB2212131003324", "cbsRespTime": "" } }</pre>

Response Codes: Response codes are not limited to below status codes

Status Code	Error Description
600 (Success)	Success response
626	Transaction Failed
625	No Response
630	Currency account combination does not match
631	billor not defined

INTERNAL FUNDTRANSFER INTEGRATION API DOCUMENTATION

API Authentication

For external fund transfer api, NBC supports the following authentication methods:

1. BASIC Authentication

This authentication uses the http header AUTHORIZATION with BASIC realm encoding username and password using Base64. i.e.

NBC-Authorization: Basic Base64(username:password).

So the third party need to provide both username and password.

2. Digital Signature

Digital signature will be used for messages exchange between the gateway and channel System. The channel system will be required to apply for digital signature from Certificate Authority (CA). Digital signatures will also be used for message(s) sharing. Message(s) must previously be signed by the Participant's private key and verified using participant's Public Key. The supported signature algorithm is **SHA256withRSA**, the whole payload should be signed, and the signature to be placed on corresponding headers.

3. API Key

The **x-api-key** header is required for all incoming requests to the API. It contains the API key used by authorized channel consumers to authenticate their access. This key acts as a security measure to ensure that only approved channels can interact with the API.
